A10 Masur

Allround knife with masur handle

The A10 is designed with a handle with a round form giving optimum comfort and strength when using the knife. The handle is made from one piece of selected masur birch wood and has a pronounced finger guard.

The blade is made from 4 mm stainless steel, Sandvik quality 12C27, and has a full tang. The thick blade makes the knife very suitable for heavy-duty use. The blade is hollow grinded and sharpened to perfection in a robot station.

The knife is carried in a secure genuine leather sheath with a buttoned transportation strap.

Steel quality: Sandvik 12C27, stainless

Blade thickness: 4 mm
